Skill

Web   Grasp

- Familiar with JS basic grammar and knowledge, master the latest JavaScript syntax and API, proficient in TypeScript
- Master the CSS, Less, SCSS, Stylus required for web page refactoring
- Master the front-end popular frameworks React, Vue and Angular

Vue   Grasp

- Ability to use Vue to develop large and complex applications, familiar with Vue principles and eco-technical stacks
- Master Vue debugging, performance optimization, asynchronous components, routing lazy loading and other extended skills

Network   Grasp

- Master the basic operating mechanism of the Internet,TCP and UDP protocol议
- Master the HTTP protocol, the new version of HTTP2 and SOCKS5 protocol also understand
- Master the construction and deployment of the server, you can skillfully climb over GFW

React   Practised

- Ability to develop medium-sized applications with React and learn about React principles
- Skilled in React debugging, performance optimization, isomorphic ReactNative and other extension skills

Webpack   Practised

- Designed and optimized the build tools for multiple medium and large projects of the team
- Understand the principles of Webpack and try to develop complex Webpack Plugin & Loader

Nodejs   Some understand

- Familiar with Nodejs standard library and model, try to use Nodejs in real projects

Experience

Chongqing huibolinong technology co. LTD   Employment
2018.9 ~ 2019.9

Participated in the unicorn of xuzhou branchfront-end development of Swan (SasS) assessment, including:

- Responsible for the team framework construction, including the construction process toolkit new technology exploration practice
- Promote the use of Ant Design For Vue and automated testing Jest framework within the company
- Design and encapsulate common components such as forms, forms and uploads to solve the problem of low development efficiency of front-end colleagues

Participated in the unicorn of Xuzhou BranchJiangbei district VR Integrity Exhibition Hallfront-end development, including

- Develop a global interface to Unity that exposes some audio video
- Refactor all popovers in the project
- Advance the use of React + TypeScript within the company

AtXuzhou Jiawang District People's GovernmentThe commission for discipline inspection participates in the front-end development of the integrated application platform (Intranet) in jiarwang district, including

- UI component library development
- Encapsulate Echarts to achieve dynamic rendering effect
- Project construction and coding specifications
- Specific module page development
- Use Vuex and image lazy loading technology to optimize the interface request and page initialization speed

AtChongqing Huibo Li Nongparticipate inSwan(SasS)open affairsfront-end development, including:

- Push forward the standardization of back-end interface documents
- Webpack configuration optimization
- The asynchronous component of Vue is used in the project
- Solve problems such as hot update failure UglifyJs error report

RightCapital   Employment
October 2019 to present

- Use Nodejs to implement their own crawler project

- You would like to develop service middleware or other build tools using Nodejs

Angular   `Some understand`

- MRefactor some projects in the company with react(Project confidentiality)

- Refactoring the CoffeeJS file in an Angular project with TypeScript

Audio and video   `Some understand`

- Understand the basic concept of audio and video codec knowledge and common audio and video transmission protocol

- Understand the architecture and principles of webcast technology

Database   `Some understand`

- Understand the basic concepts of relational databases and SQL

- Will operate SQLite, MongoDB

At RightCapital Beijing branch participate in the development of front-end projects, including:

- Will CoffeeJS file in angular project to TypeScript

- Refactoring an angular project with react

Ohter

- VSCode and Vim users

- Master the use of Git, Docker, Jest, Jira

- Can try to deploy CI/CD

- Can skillfully set up Raspberry

- Proficient in using Google Stack Overflow and MDN to solve problems
